

Privileged Access Management REMOTE ACCESS

wallixone

Secure access without VPN, without shared passwords, and without compromising security!

WALLIX One Remote Access is a SaaS solution that secures, centralizes, and manages external access, which is crucial for businesses relying on external service providers for remote tasks involving privileged access to IT or OT networks. This tool addresses common challenges faced by IT management departments, such as inventorying third-party access and regaining control. Additionally, **WALLIX One Remote Access** enhances auditability and traceability, further strengthening organizational security measures.

Features

End-to-end security

- Grant access without sharing passwords
- Enforce MFA on every remote access
- Just-In-Time access
- Segregate external users from the corporate directory
- Outbound connections

Hybrid architecture

- Preserve local access when the internet is down
- Deploy decentralized architecture compliant with regulations (NIS2, IEC,...)
- Support multi-site Bastion deployment

Accelerate user onboarding

- Centralized Web Portal access for every session (RDP, SSH, HTTPS, Proprietary Protocols via Universal Tunneling)
- Easy onboarding of remote users with automatic mail
- Delegate user management to business owners
- Self-service password reset (SSPR)

Full visibility of external remote access

- Assign granular access with group-based authorizations (RBAC)
- Integrate with external Identity Providers

Technical Characteristics

> Federation Protocol

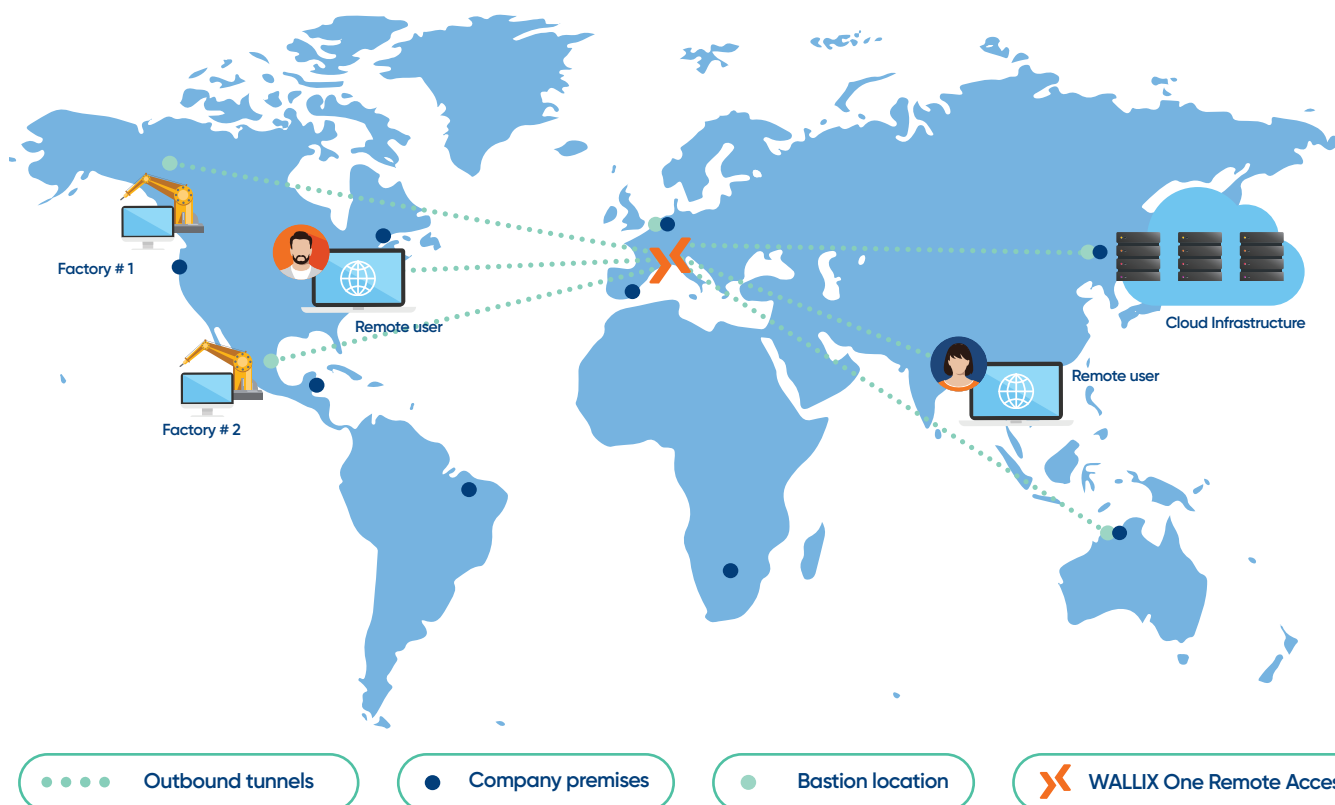

- OpenID

> Multi-Factor Authentication (MFA)

- OTP with broad compatibility (WALLIX, Microsoft, Google, ...)
- Security Key FIDO (Yubikey, ...)
